

# TP349

## Project

**Stanley School**  
Teddington

**thermotec**

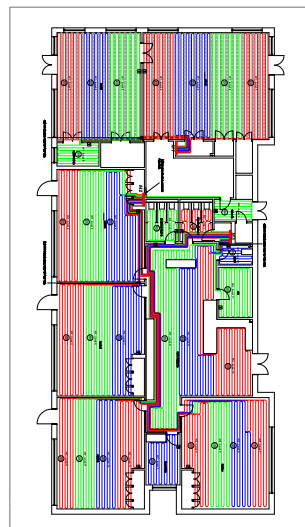

### Project Brief

Working to an exceptionally tight timescale to get the school accessible again with minimum downtime, the entire underfloor heating system was installed within just 4 days. In spite of the various challenges with the building structure, Thermotec worked with K & A Construction to achieve this deadline without compromising our high quality workmanship.

### Scope of Works

Thermotec delivered a fully integrated floor build up system from the subfloor base up to the final floor screed using our TPA13 Aquafloor moulded board system. The project was managed, installed and supervised by Thermotec, and was delivered on time and within budget.

**Project Value:** £7M

### Project Details

Stanley Primary School sits at the heart of the local community, so it was devastating for staff, students and parents alike when a large part of the school was severely damaged by a roof leak and subsequent flooding. The major rebuilding and refurbishment programme which included stripping out, cleaning and drying works provided the school with excellent facilities to meet the demands of education in the 21st century.
